

## Dual Trim Masking Tape

### Masking Tapes make your life easier

KENT Dual Trim Masking Tape can do more than one application

**Duisburg, April 2020, with the Dual Trim Masking Tape KENT sets the focus on masking once more. Dual Trim means that this tape is a convenient alternative for masking gaps and rubber seals as this tape has two adhesive layers and a lifting tab avoiding paint lines during painting.**

Covering vehicles or parts is one of the most time consuming tasks in paint preparation and often requires many different masking products. KENT Dual Trim Masking Tape offers the easiest application when masking. Thanks to the perforation and double-sided adhesive, even hard-to-reach areas can be covered in the shortest and easiest way. For example, rubber seals can be easily and quickly protected against paint mist. The PVC-edge ensures that even the narrowest of spaces can be covered.

Stick the tape to the underside of the roof rail by removing the liner from the narrow section of the tape and repeat. After this process close the door and remove the protective film from the adhesive and pull it over the rubber seal.

Given the fact that this tape can be used for more than a single application does not make other masking tapes less important. KENT shows that each tape plays its role. Whether it be gaps, curves, straights or special applications: KENT always has the answer.
