

## **Press Release**

### **Ultrafill 2 – strong, fast and easy**

#### **KENT's 1k primer filler spray**

Duisburg, January 2017. Ultrafill 2 is a smart solution for paint shop and garage professionals. The one-component primer filler is sprayed on treated metal surfaces and plastic parts prior to painting. It fills extremely well, dries fast and enables easy sanding.

KENT's Ultrafill 2 is a high performance 1k product, combining strong adhesion to metal and plastic with high flexibility. This makes it ideal for priming and filling, especially on SMART repair jobs. Ultrafill 2 is suitable to fill scratches, sanding grooves and minor damages also on small parts, e. g. the outside mirror housing. With its excellent filling, the primer filler can be used on engine hoods, doors, roofs, mudguards, side panels and bumpers as well as on A, B and C pillars. It is ready to use.

Thanks to a high solid content, filling and coverage is extremely efficient. The automotive professional will also appreciate the fast drying time of approximately 15-20 minutes, de-pending on coat thickness and temperature. Immediately afterwards, the surface can be sanded. Ultrafill 2 is highly corrosion-resistant and compatible with all leading car paint systems including water-based paints.

Available in 6 colours as 500 ml spray tin.
